Athena Crowdsourced Research

BRING OUT VIBRANT COLOR, FLAVOR, & AROMA

Proper is a high-concentration humic and fulvic component combined with balanced phosphorus, potassium, and micronutrients, built from what Athena learned through its Crowdsourced Research network. Combining fulvics with optimized phosphorus and potassium levels and a balanced micronutrient profile helps optimize nutrient use efficiency, so the plant can reach its full genetic potential in yield, terpenes, flavor and quality.

Ghost Budsters Farm

Strain: Death By Boof

"Adding Proper, we saw more resin, denser flower, louder terps, and the numbers followed: yield, THC, and terpenes all went up, with zero fallout. You don't have to fix what's working — you make it better."

Mitten Canna Co.

Strain: Blue Lobster Guava

"We saw a 20.4% increase in yield with Proper, and the flower was noticeably louder. The results were strong enough that I'm looking at adding another doser to make it part of our regular feed program."

WHAT PROPER DOES

- Supports terpene expression, aroma and flavor
- Promotes bag appeal and overall flower quality
- Optimizes nutrient use efficiency with concentrated humic and fulvic compounds
- Balanced phosphorus, potassium and micronutrients in one targeted input
- Adds to a proven Athena program without adding complexity

PLUG IN. LET IT WORK.

Athena Modifiers are designed to integrate into your irrigation system — run Proper from its own doser alongside your base feed from mid flower.
